

Customer Journey Map

1. BRAINSTORMING & IDEATION

Date	4 July 2026
Team ID	XXXXXX
Project Name	A Comprehensive Measure of Well Being
Maximum Marks	2 Marks

Brainstorming & Idea Prioritization Template

This document tracks our design thinking lifecycle, from listing candidate ideas to evaluating feasibility and selecting our final implementation architecture.

Step 1: Brainstorm and Idea Listing

S.NO	TEAM MEMBER	IDEA / SUGGESTION	CATEGORY	GROUP NO.
1	AI Engineer	Build an interactive Flask Web UI with custom styling and light/dark theme toggle	Web Interface	Group 1
2	ML Engineer	Train a multi-variate Linear Regression model on UNDP indicators using Scikit-Learn	Machine Learning	Group 2

S.NO	TEAM MEMBER	IDEA / SUGGESTION	CATEGORY	GROUP NO.
3	AI Engineer	Add browser-caching (localStorage) to save prediction history locally without a DB	Caching / Storage	Group 3
4	ML Engineer	Use deep neural networks (PyTorch) to predict non-linear HDI composite indexes	Machine Learning	Group 2
5	UI Designer	Build visual EDA panels containing correlation maps and GNI scatter plots directly in UI	Visualizations	Group 4
6	QA Engineer	Write unit tests verifying input validation ranges and Flask routes response codes	Testing	Group 5

Step 2: Idea Prioritization

GROUP NO.	FINAL IDEA	FEASIBILITY (HIGH/MEDIUM/LOW)	IMPORTANCE (HIGH/MEDIUM/LOW)	PRIORITY	SELECTED (YES/NO)
Group 1	Responsive Flask dashboard with custom stylesheet and Dark Mode	High (Flask provides lightweight server routes; Bootstrap ensures styling grids)	High (Ensures professional UX and cross-device responsiveness)	1	Yes
Group 2	Linear Regression model trained on melted UNDP panel data	High (Scikit-learn features standard fit routines; coefficients map directly to indices)	High (Driving core prediction functionality)	1	Yes
Group 2	Neural Networks predictor	Medium (Higher compilation overhead; potential overfitting for tabular datasets)	Medium (Regression is simpler and highly interpretable)	3	No (Linear Reg achieves 99.4% R^2)

GROUP NO.	FINAL IDEA	FEASIBILITY (HIGH/MEDIUM/LOW)	IMPORTANCE (HIGH/MEDIUM/LOW)	PRIORITY	SELECTED (YES/NO)
Group 3	LocalStorage history caching with CSV export capability	High (Simple browser-side JS API; zero database setup requirements)	High (Supports quick data tracking and user convenience)	2	Yes
Group 4	Matplotlib/Seaborn EDA plots generated and rendered in UI tabs	High (Visual assets compiled during model training)	High (Provides crucial model insights for researchers)	2	Yes
Group 5	Unittest automated testing suite	High (Standard Python unittest library integration)	High (Ensures regression-free backend routes and validation bounds)	1	Yes
