Empathy Map

Understanding our core user persona helps us build a customer-centric solution. This empathy map focuses on the **Policy Analyst** persona.

Persona: Elena Vance (Development Policy Analyst)

SAYS		THINKS	
* "I need to run real-time simulations for our education reforms before presenting."		* "I wonder if increasing secondary schooling yields more HDI gain than increasing health funding?"	
* "Manual data cleaning in Excel takes up 60% of my workday."		* "Static data charts from 2021 don't help predict future development goals."	
* "The tool must look modern and be accessible on my tablet."		* "I hope the prediction model is mathematically explainable."	
PERSONA:			

	Elena Vance	
	+-----+	
	DOES	FEELS
	* Consolidates annual UN reports manually into local files.	* Overwhelmed by scattered, wide datasets in varying formats.
	* Presents development proposals to regional decision makers.	* Skeptical of opaque "black-box" ML predictions.
	* Formulates action items based on weakest regional indexes.	* Relieved when finding clean, explainable, visual dashboards.
	+-----+	

Design Requirements Driven by Elena's Empathy Map

- 1. **Interactive Simulation:** Built a reactive input form where slider actions dynamically update indicator values in real-time.
- 2. **Explainable ML Model:** Provided an /about route demonstrating the exact mathematical normalization formulas and the fitted feature weights of the model.
- 3. **Data Caching & Export:** Configured client LocalStorage to store prediction histories, avoiding database load times, and added a quick CSV/JSON exporter.
